Abstarck

This time I will make a program that is specifically designed to assist in the management of books, such as in the library. There is a Visitor Data Form, Member Data, Loan & Granting Transactions, Book input and several reports.

KataKunci : create a database library program with Borland Delphi

A. INTRODUCTION

The library as one of the sources of information has utilized the information system even though it has not been well integrated.

Various problems were found in systems that were still manual, unstructured library data, circulation services, and the difficulty of management in making decisions because of the lack of information obtained in knowing. library development so that a better system is needed With this I will create the database first in Ms Access

Please connect Ms Access data to Form Delphi that you have created. Read How to Connect Ms Access Data to Delphi at.

B. CONCLUSION

So that the existence of this information system is expected to be orderly, orderly and accurate can be achieved and the information needed can be presented quickly, precisely, accurately and reliable. With this research, it is expected that it can be used to assist in the

preparation of reports, rapid calculations, get the results of accurate and correct calculations and well organized data, stored safely and easily traceable.
