Traits and Empowerment of Team Leaders

Marian M. Sawit
Mauro Allan P. Amparado

Abstract

This study determined the traits and empowerment of the team leaders of the College of Nursing, University of Cebu Banilad, Cebu City, Cebu, Philippines. The research utilized descriptive-correlational design with 90 clinical instructors as participants. A researcher-made questionnaire was used to collect data. Statistical treatment used were weighted mean, hypothetical mean range, and chi-square Test of Independence.

The leadership traits of the subjects in terms of manager-follower relationship is partially exhibited while the task structure proved to be moderately structured. The manager power is moderately powerful since some of the basic functions of a manager has been employed. In terms of empowerment of the team leaders, it was interpreted as mostly empowered.

In conclusion, the study revealed that there is no significant relationship between leadership traits and empowerment.
