Abstract

Patents are special rights granted by the State to the inventor for the results of their achievements or discoveries in the field of technology, for a certain period of time implementing their own findings or describing their approval to others to implement them. This right is regulated in Article 1 Paragraph 1 of the Law concerning PATENT. All about Patents, Patents cannot be separated from something, that is Inventor. The definition of Inventor itself is a person or more who jointly implements ideas that are poured into activities that produce inventions (findings).

Regarding Patents, this time will discuss the patent of a product, SAMSUNG. SAMSUNG is one of the largest electronics companies in the world. SAMSUNG was founded and patented by Lee Byung Chull on March 1, 1938 in Daegu, South Korea. In 1937, due to the outbreak of a war between China and Japan, Byung-chul, who at that time had a small rice mill and transportation business in Masan, the southeast coast of the Korean peninsula, was forced to move his business to Taegu, an area in the northeast. From there Samsung legend began. At that time, he really started the history of his business by facing obstacles and obstacles first.

We can conclude that it really needs a very strong desire to achieve something big and proud. Because basically, a company engaged in the field of technology equipment is indeed a company that is not only unknown by the wider community, but thanks to the hard work of Lee Byung Chull as the current patent holder, SAMSUNG has held the highest rate as a provider of electronic goods or technology which should be taken into account in terms of business in the world.

Keywords: Patents, technology, inventors, inventions, electronics and rates.

A. INTRODUCTION

Patent, in general, what is meant by Patent? Patent is a special right granted by the State to the inventor for the results of his achievements or discoveries in the field of technology, for a certain period of time carrying out his own invention or describing his agreement to others to implement it. This right is regulated in Article 1 Paragraph 1 of the Law concerning PATENT.

Regarding of Patents, Patents cannot be separated from something called Inventor. The definition of Inventor itself is a person or more who jointly implements ideas that are poured into activities that produce inventions (findings).

In accordance with the title of the article that I wrote, namely Knowing Patents on SAMSUNG Products is of course inseparable from matters relating to ownership or patenting of these products.

SAMSUNG is one of the largest electronics companies in the world. SAMSUNG was founded and patented by Lee Byung Chull on March 1, 1938 in Daegu, South Korea.

At present, the company has operated in approximately 58

countries in the world and already has more than 210,000 workers spread across various parts of the world. Until 2018, SAMSUNG has become one of the largest and most trusted brands in technology and is able to issue products that are able to compete in this increasingly sophisticated world of technology.

Samsung is one of the largest South Korean conglomerates (chaebol) which started as an export company in 1938 and quickly expanded to other fields.

According to the owner of the patent from Samsung Group founder Lee Byung Chull, the word SAMSUNG is taken from the Korean language itself which is interpreted as "Three Stars".

Let's see a little about the history of the business of patent owner Lee Byung, chull. Now, who doesn't know Samsung? Currently it is a large enough manufacturer of electronic devices such as smartphones, laptops, notebooks, etc. in the world. Even so, who would have thought that at first Lee Byung chull started his business by selling dried fruit, vegetables and fish in Taegu, northeast Korea.

In 1937, due to the outbreak of a war between China and Japan, Byung-chul, who at that time had a small rice mill and transportation business in Masan, the southeast coast of the Korean peninsula, was forced to move his business to Taegu. From there Samsung legend began.

In the city of Taegu Byung-chul established a general store with an initial capital of 30,000 won. Taking the name Samsung, which means three stars, he wants this store to become a big, strong and long-lasting company like a star in the sky.

In addition, Byung-chul obtained initial capital to establish Samsung apart from his family, also from a Japanese bank. This shows the expertise in doing business with Byung-chul, because at that time the trading shop did not have access to similar funds.

During World War II, Byung-chul learned a lot about the market and took advantage of business opportunities. He paid close attention to how Japanese conglomerates, often referred to as zaibatsu.

It didn't take long for Samsung to develop. Within a little over a decade, Samsung

has its own flour mill, candied machinery, manufacturing and sales operations.

Then between 1945 and 1948, Byung-chul moved his business headquarters to Seoul. He then opened the Samsung Trading Corporation in 1948. After two years, Samsung had established trading companies in Masan, Taegu and Seoul.

Once bankrupt, because of political support from President Syngman Rhee's regime in 1946 to 1960, the company experienced rapid growth. Had tripped over an illegal raw material case that ensnared the Fertilizer Tank which was founded by Samsung in 1963, Byung-chul then resigned as Chairman of Samsung in 1967.

Two years later he returned to being the Chairman of Samsung and founded Samsung Electronics, which later became a very calculated global player today. So, despite being born from a wealthy family but not making Byung-chul lazy or relying on what he already has from his family, that's a short journey by Byung-chul to establish a company that is currently very calculated in the world of technology.

B. CONCLUSION

Patent is a right that regulates the ownership of an invention or product made by someone or more that is intended to create a product that aims to compete in the business world in any field, especially in the field of technology. For example SAMSUNG, I now associate with Lee Byung Chul, a big name descendant of a wealthy Korean family who is known as a patent holder of a well-known company called SAMSUNG GRUP.

Companies that are engaged in technology equipment that adapts to the times. At present, SAMSUNG has held the highest rate as a provider of electronic or technology goods that deserve to be taken into account in terms of business in the world.

Basically, SAMSUNG GROUP is a company that was originally founded by Byung-chul through many obstacles and barriers and also at first got past the ups and downs to finally become a highly calculated company and at this time has gained spectacular profits every year and has grown to now even though he is dead.
