Abstract

Hospital is a place that is used to check and treat people who are sick. In this hospital there must be many people who examine their health every day. Of course the hospital needs a management for all of these data. These data include patient data, doctor data, data space.

So the Hospital Information System was used to facilitate data management in hospitals. This system is of course already using a computerized method, because with the use of computerized methods, the process of inputting data, data retrieval processes and data updating processes is very easy, fast and accurate.

Kata Kunci : Cash Receipts and Expenditures.

A. INTRODUCTION

The screenshot shows a web-based form for entering patient data. The form is titled "INPUT DATA PASIEN" and "...: PASIEN :...". It contains several input fields: "Kode Pasien", "Nama Pasien", "Alamat Pasien 1", "Alamat Pasien 2", "Kota", "Kode Pos", and "Telepon". There are also two dropdown menus labeled "Pilih Daerah" and "Pilih Kota". On the right side, there are buttons for "SAVE", "EDIT", "DELETE", "CLEAR", and "EXIT".

Hospital is a place that is used to check and treat people who are sick. In this hospital there must be many people who examine their health every day. Of course the hospital needs a management for all of these data. These data include patient data, doctor data, data space

B. CONCLUSION

In the hospital it requires a management for all of these data. These data include patient data, doctor data, data space.

So the Hospital Information System was used to facilitate data management in hospitals. This system is of course already using a computerized method, because with the use of computerized methods, the process of inputting data, data retrieval processes and data updating processes is very easy, fast and accurate.
