A Comparative Study of the Qu'ranic Correctness Claims between Wahid and Tahara

Uthman Tahara Hiroki ibn Afaq

ABSTRACT: *The study of Wahid is based on his Islamic faith and seems to be similar with “intelligent design theory”. His studies are qualitative considering biological and mysterious phenomena evidences and seem to be affected by “Bucailleism”. Compared with them, Tahara’s study does not seem to be affected by any religious ideologies and the theories are written by mathematical concepts. However, his study is not exactly scientific because of the ill-definedness of the Tahara’s I function, the mathematical function which represents the perfect Qu’ranic interpretation, the key of Tahara’s theory. These common points seem to be extremely few.*

KEYWORDS: *Qu’ran, Islam and Science, Intelligent Design, Bucailleism, Tahara’s I function.*
