Because on this book has introduced the science of philosophy through the medium of books he wrote. This book is highly recommended because the light, dense and directed reading makes the reader more comfortable understanding it and eliminates confusion and skepticism of philosophy itself.

This book has a huge influence on its readers. The reader's questions have largely been answered on the book within author explains what the reader is asking clearly, and it dispels the ambiguous and skeptical view of philosophy. One of them in chapter 4 which discusses the

nationalists, there is a question in the sub-chapter of the discussion on meditation which in the sub-chapter questions "How can we be sure that our sensory experience in the outside world is not really a dream". The author answers the question in the fourth paragraph of page 56, saying that "Sensory experience is ruled out because experience is uncertain and not enough as justification of a science" and gives one example of a claim from Descartes through reasoning that believes that $2 + 2 = 4$. In this case Descartes imagines that the devil can deceive to always say $2 + 2 = 4$ is true when in fact it is wrong.

The evidence uses is quite strong in reinforcing the theory he presented. In presenting a theory, and lists the validity of the theory by placing who came up with the theory and provides an example of a view of the theory that has been described earlier. Obviously, the evidence presented in the book, which the source of the evidence comes from leading experts in the theory. No doubt on the validity of the basis of evidence written by author.

In writing this book, author uses a language style that is light and understandable to readers. What we know is that most people bother reading philosophy books is a scourge. Due to the use of a style of language that is not understood by the general public and the discussion is heavy. Not with a book called ABC Philosophy "Knowing How to Think Forward for Yourself and the World" which is very light discussion especially for beginners who want to know the world of philosophy as a prefix.
